

Oracle Database 12c R2: Backup and Recovery Workshop Ed 3

Duration: 5 Days

What you will learn

In this Oracle Database 12c R2: Backup and Recovery Workshop, students learn how to perform backup and recovery based on the related Oracle Database architecture components. Various backup, failure, restore, and recovery scenarios are provided so that students learn to evaluate their own recovery requirements and develop an appropriate strategy for backup and recovery procedures. This course includes an interactive workshop, with scenarios that provide participants with opportunities to diagnose and recover from several failure situations. Learn To:

- develop appropriate backup and recovery procedures to address your business needs.
- implement backup and recovery settings and perform backup operations to disk and tape.
- employ oracle database recovery procedures to recover from media and other failures.
- diagnose and repair data failures.
- use flashback technologies and data duplication to complement backup and recovery procedures.
- secure the availability of your database by appropriate backup and recovery strategies.

The student benefits by gaining a deeper understanding of possibly the most important job of a DBA – backup and recovery. The concepts and architecture that support backup and recovery, along with the steps of how to carry it out in various ways and situations, are covered in detail. Students gain knowledge of the Recovery Manager (RMAN) command line interface for various backup, failure, restore, and recovery scenarios, including tape backup and data duplication. (Familiarity with basic database tools and utilities, such as, SQL*Plus, is assumed.) Hands-On Lessons Extensive hands-on practices and workshop scenarios provide the student with experience in a realistic technical environment. This course includes an interactive workshop that provide participants with opportunities to diagnose and recover from several failure scenarios, based on backup and recovery case studies. After completing this course, students should be able to evaluate their own recovery requirements and develop an appropriate strategy for backup and recovery procedures.

Audience

Data Warehouse Administrator
Database Administrators
Support Engineer
Technical Administrator
Technical Consultant

Related Training

Required Prerequisites

Knowledge of Oracle Database 12c

Knowledge of SQL and PL/SQL (for DBA use)

Oracle Database 12c R2: Install and Upgrade Workshop Ed 2 NEW

Oracle Database 12c R2: Administration Workshop Ed 3

Suggested Prerequisites

Using Oracle Enterprise Manager Cloud Control 13c Ed 1

Using Oracle Enterprise Manager Cloud Control 13c Ed 2

Course Objectives

Configure the database for recoverability

Describe Cloud Tooling for Backup and Recovery

Describe Oracle Database backup methods and recovery operations that can be used to resolve database failure

Describe the Oracle Database architecture components related to backup and recovery operations

Perform an encrypted database backup and restore

Perform tablespace point-in-time recovery

Plan effective backup and recovery procedures

Use Oracle Flashback Technologies to recover from human error

Use Recovery Manager (RMAN) to create backups and perform recovery operations

Use the Data Recovery Advisor to diagnose and repair failures

Course Topics

Introduction

Curriculum Context

Assess your recovery requirements

Categories of failures

Oracle backup and recovery solutions

Oracle Maximum Availability Architecture

Oracle Secure Backup

Benefits of using Oracle Data Guard

Basic Workshop Architecture

Getting Started

Core Concepts of the Oracle Database, critical for Backup and Recovery

Oracle DBA Tools for Backup and Recovery

Connecting to Oracle Recovery Manager (RMAN)

Quick Start: A Problem-Solution Approach

Configuring for Recoverability

RMAN commands

Configuring and managing persistent settings

Using the Fast Recovery Area (FRA)

Control File
Redo Log File
Archiving Logs

Using the RMAN Recovery Catalog

Creating and Configuring the Recovery Catalog
Managing Target Database Records in the Recovery Catalog
Using RMAN Stored Scripts
Maintaining and Protecting the Recovery Catalog
Virtual Private Catalogs

Backup Strategies and Terminology

Backup Solutions Overview and Terminology
Balancing Backup and Restore Requirements
Backing Up Read-Only Tablespaces
Data Warehouse Backup and Recovery: Best Practices
Additional Backup Terminology

Performing Backups

RMAN Backup Types
Incrementally Updated Backups
Fast Incremental Backup
Block Change Tracking
Oracle-Suggested Backup
Reporting on Backups
Managing Backups

Improving Your Backups

Compressing Backups
Using a Media Manager
Backup and Restore for Very Large Files
Creating RMAN Multisection Backups, Proxy Copies, Duplexed Backup Sets and Backups of Backup Sets
Creating and Managing Archival Backups
Backing Up Recovery Files
Backing Up the Control File to a Trace File
Cataloging Additional Backup Files

Using RMAN-Encrypted Backups

Creating RMAN-Encrypted Backups
Using Transparent-Mode Encryption
Using Password-Mode Encryption
Using Dual-Mode Encryption

Diagnosing Failures

Reducing Problem Diagnosis Time
Automatic Diagnostic Repository
Data Recovery Advisor
Handling Block Corruption

Restore and Recovery Concepts

Restoring and Recovering
Instance Failure and Instance/Crash Recovery

Media Failure

Complete Recovery (Overview)

Point-in-Time Recovery (Overview)

Recovery with the RESETLOGS Option

Performing Recovery, Part I

RMAN Recovery in NOARCHIVELOG Mode

Performing Complete Recovery (of critical and noncritical data files)

Restoring ASM Disk Groups

Recovery with Image Files

Performing Point-in-Time (PITR) or Incomplete Recovery

Performing Recovery, Part II

Recovery of Server Parameter File, Control File (One and All)

Redo Log File Loss and Recovery

Password Authentication File Re-creation

Index, Read-Only Tablespace, and Tempfile Recovery

Restoring the Database to a New Host

Disaster Recovery

Restoring RMAN Encrypted Backups

RMAN and Oracle Secure Backup

Oracle Secure Backup Overview and Interface Options

RMAN and OSB: Overview and Basic Process Flow

Starting with Oracle Secure Backup

Configuring Oracle Secure Backup for RMAN

RMAN Backup and Restore Operations

Oracle Secure Backup Jobs

Displaying OSB log files and transcripts for RMAN activities

Using Flashback Technologies

Flashback Technology: Overview and Setup

Using Flashback Technology to Query Data

Flashback Table

Flashback Transaction (Query and Backout)

Flashback Drop and the Recycle Bin

Flashback Data Archive

Using Flashback Database

Flashback Database Architecture

Configuring Flashback Database

Performing Flashback Database

Best Practices for Flashback Database

Transporting Data

Transporting Data Across Platforms

Transporting Data with Backup Sets

Database Transport: Using Data Files

Performing Point-in-Time Recovery

When to use TSPITR

TSPITR Architecture

Performing RMAN TS Point-in-time Recovery
Recovering Tables from Backups

Duplicating a Database

Using a Duplicate Database
Duplicating Database with "push" an "pull" techniques
Choosing Database Duplication Techniques
Creating a Backup-up Based Duplicate Database
Understanding the RMAN Duplication Operation

RMAN Troubleshooting and Tuning

Interpreting RMAN Message Output
Tuning Principles
Diagnosing Performance Bottlenecks
RMAN Multiplexing
Restore and Recovery Performance Best Practices

Cloud Tooling for Backup and Recovery

Backup Destinations
Customize Backup Configuration
On-Demand Backup and Recovery
Oracle Backup Cloud Service
Installing the Backup Module

Backup and Recovery Workshop

Workshop Structure and Approach
Business Requirements for Database Availability and Procedures
Diagnosing the Failures
